StarBug Cafeteria Management System	Version: 1.0
Use-Case Specification:	Date: 07/11/2023
<document identifier>	

Use-Case Specification: <Use-Case Name>

1. Use-Case model

2. Use-case specifications

2.1 Use-case: View product details

Use-case name	View product details
Brief description	This use case outlines the steps a guest and customer takes to view detailed information about a specific product on the StarBug's website
Actor	Guest, Customer
Basic flow	<ol style="list-style-type: none"> 1. The actor navigates to the StarBug website. 2. The system returns the homepage of the website with the grid of product 3. The actor browses the product grid and clicks on the product of interest to view more details. 4. The system displays the product details, including its name, images, description, price, average rating, size and toppings

StarBug Cafeteria Management System	Version: 1.0
Use-Case Specification:	Date: 07/11/2023
<document identifier>	

Alternative flow	Alternative 1: The actor uses the search function to find a specific product 1. From basic flow #3, the user chooses one of the results to view more details 2. Continue to step #4.
Pre-conditions	1. The StarBug website is accessible and functional. 2. The product catalog is up to date
Post-conditions	1. The system displays the relevant details. 2. The user has successfully viewed detailed information about the selected product.

2.2 Use-case: Search products

Use-case name	Search products
Brief description	This use case outlines the steps the guest or customer takes to search for a specific product
Actor	Guest, customer
Basic flow	1. The actor navigates to the StarBug's website. 2. The system returns the homepage of website with the grid of product 3. The actor clicks on the search box (with a text saying "search" and a magnifying glass icon) 4. The actor enters the keywords related to the product, such as the name of a specific coffee blend or a related category (e.g "espresso", "organic coffee"). 5. The system performs a search based on the entered keywords. 6. The system displays a list of products matching the search criteria. 7. The actor can click on a product to view more details or continue refining the search.
Alternative flow	Alternative flow 1: If the search yields no result 1. From step #5, the system will notify the customer by displaying "The product is not found". 2. The actor refines their search with different keywords. 3. Continue to step #5
Pre-conditions	1. The StarBug website is accessible and functional. 2. The search functionality is operational.
Post-conditions	1. The system returns the result of the search. 2. The actor received a list of products matching with their search criteria

2.3 Use-case: Add a product to cart

Use-case name	Add a product to cart
Brief description	This use case outlines the steps a guest or a customer takes to add a specific product to their cart on the StarBug's website
Actor	Guest, Customer

StarBug Cafeteria Management System	Version: 1.0
Use-Case Specification:	Date: 07/11/2023
<document identifier>	

Basic flow	<ol style="list-style-type: none"> 1. The actor navigates to the coffee shop's website 2. The system returns the homepage of the website with the grid of product 3. The actor browses the product catalog. 4. The actor clicks the "Plus" icon next to the product they choose. 5. The system returns a form showing the product and its options (size, quantity, toppings) 6. The actor choose their preferred options and click "Add to cart" 5. The system updates the shopping cart with the added items with quantity and total price 6. The actor may choose to either continue shopping or proceed to checkout
Alternative flow	<p>Alternative flow 1: The customer uses the add to cart button in the product detail page.</p> <ol style="list-style-type: none"> 1. From step #3 of the basic flow, the actor chooses to view details on a product. 2. The actor selects the desired quantity and size, type, topping, and then clicks "Add to cart" button. 3. Continue to step #5 of the basic flow.
Pre-conditions	<ol style="list-style-type: none"> 1. The actor can access the StarBug website homepage. 2. The add to cart functionality is functional.
Post-conditions	<ol style="list-style-type: none"> 1. The selected product has been added to the customer's shopping cart. 2. The system reflects the updated cart with the added item, quantity, and total price.

2.4 Use-case: Delete product from cart

Use-case name	Delete product from cart
Brief description	This use case outlines the steps a customer or a guest takes to remove a product from their shopping cart on the StarBug's website
Actor	Guest, customer
Basic flow	<ol style="list-style-type: none"> 1. The actor accessed the homepage on StarBug's website. 2. The actor clicks on the shopping cart icon to view the contents. 3. The system displays a summary of the items in the cart, including names, quantities, and total price. 4. The actor identifies the item they want to remove. 5. The actor clicks on the garbage can icon next to the product they want to remove. 6. The system updates the cart, removing the selected product. 7. The system calculates the total price based on the remaining items in the cart.

StarBug Cafeteria Management System	Version: 1.0
Use-Case Specification:	Date: 07/11/2023
<document identifier>	

Alternative flow	<p>Alternative flow 1: Empty cart.</p> <ol style="list-style-type: none"> From step #5 of the basic flow, if the actor removes the last item from the cart The system informs them that no orders are available.
Pre-conditions	1. The actor must have items in their shopping cart.
Post-conditions	<ol style="list-style-type: none"> The actor has successfully removed a product from their cart. The system reflects the updated cart without the deleted item. The actor can continue to go shopping.

2.5 Use-case: Update product in cart

Use-case name	Update product in cart
Brief description	This use case outlines the steps a customer or a guest takes to update a product from their shopping cart on the StarBug's website
Actor	Guest, Customer
Basic flow	<ol style="list-style-type: none"> The actor accessed the homepage on StarBug's website. The actor clicks on the shopping cart icon to view the contents. The system displays a summary of the items in the cart, including names, quantities, and total price. The actor clicks the pencil icon button to update. The system returns the edit popup. The actor adjusts the quantity or selects different variations like the size, topping of the product. The system updates the cart. The system calculates the total price based on the items in the cart.
Alternative flow	<p>Alternative flow 1: Actors update the information that has the same value with another item in the cart.</p> <ol style="list-style-type: none"> From step #7 of the basic flow, the system increases the quantity of the item that has the same value. Continue to step #8 of the basic flow.
Pre-conditions	1. The actor has items in their shopping cart.
Post-conditions	<ol style="list-style-type: none"> The actor has successfully updated the product from their cart. The system reflects the updated cart with the changes made by the actor. The actor can continue to go shopping.

2.6 Use-case: Sign up

Use-case name	Sign up
---------------	---------

StarBug Cafeteria Management System	Version: 1.0
Use-Case Specification:	Date: 07/11/2023
<document identifier>	

Brief description	This use cases outlines the steps a potential customer takes to create an account on the StarBug's website
Actor	Guest
Basic flow	<ol style="list-style-type: none"> 1. The actor navigates to the homepage of StarBug's website. 2. The actor clicks on the "Login" button. 3. The actor clicks on the "Sign up" button at the bottom left of the login form. 4. The system displays a registration form prompting the actor to enter required information, such as name, email address, password and phone number. 5. The actor fills out the registration form with the necessary information 6. The actor submits the registration form by clicking the "Sign up" button. 7. The system validates the entered information (e.g checks for valid email format, password requirements). 8. The system then sends a verification email to the actor. 9. The actor clicks on the link provided in the email. 10. The system creates a new customer account and saves it to the database. 11. The system redirects the newly created customer back to the homepage.
Alternative flow	<p>Alternative Flow 1: Existing email address</p> <ol style="list-style-type: none"> 1. From step #6 of the basic flow, if the email address entered during registration is already associated with an existing account, the system notifies the actor. 2. The actor change the email to another address. 3. Continue to step #7 of the basic flow. <p>Alternative Flow 2: Invalid Information</p> <ol style="list-style-type: none"> 1. From step #6 of the basic flow, If the entered information does not meet validation criteria (Invalid email format), the system provides error messages indicating the specific issues. 2. The actor corrects the information. 3. Continue to step #7 of the basic flow.
Pre-conditions	<ol style="list-style-type: none"> 1. The StarBug website is accessible and functional.
Post-conditions	<ol style="list-style-type: none"> 1. The actor has successfully created a new account. 2. The system saves the new account information into the database. 3. The actor can log in using the newly created account credentials.

StarBug Cafeteria Management System	Version: 1.0
Use-Case Specification:	Date: 07/11/2023
<document identifier>	

2.7 Use-case: Sign in

Use-case name	Sign in
Brief description	The use-case describes how actors log in their account.
Actor	Customer, staff, manager
Basic flow	<ol style="list-style-type: none"> 1. The actor enters the Starbug website, clicks on the "login" button 2. The system pops up a log-in form and asks for the email and password 3.
